ACTIVITY A1
Build the Environmental Baseline and Aspect Inventory

Identify workplace environmental hazards and aspects from process and site evidence.

Participant scenario and completion checklist

Version 8.0 | 20 August 2026

Scenario

MEP is preparing its first ISO 14001:2026-aligned EMS. Managers have energy bills and waste invoices, but no shared view of where activities interact with air, water, land, resources or neighbours.

Organisation: Meridian EcoPack Pte Ltd (MEP) is a fictional Singapore SME with 120 employees producing printed corrugated and fibre-based packaging for regional food, electronics and healthcare customers.

Your task

Trace MEP's materials, energy, water, emissions, waste and emergency interfaces and distinguish hazard, aspect and impact.

Expected output: A process-boundary map, environmental baseline and aspect-impact inventory with evidence references.

Decision questions

1. Which activities, products and services create direct or influenced environmental interactions?

2. For each interaction, what is the aspect and what is the resulting environmental impact?

3. What normal, abnormal and emergency conditions must be included, and what evidence is still missing?

Completion checklist

Done	Check	Evidence/reference
[ ]	Read the company profile, process flow, site plan and evidence cards before scoring anything.	
[ ]	Define the review boundary from receipt of paper and inks through printing, conversion, storage, dispatch and end-of-life influence.	
[ ]	Walk each process stage and record inputs, outputs, releases, resource use, waste streams and potential emergencies.	
[ ]	Write each aspect as a cause or interaction and each impact as a change to the environment.	
[ ]	Tag the operating condition, control/influence level, evidence source, owner and missing data for every entry.	
[ ]	Peer-review for omissions at maintenance, contractors, utilities, transport and product end-of-life stages.	
[ ]	Conclusions are traceable; assumptions, uncertainties and missing evidence are labelled.	
[ ]	A peer challenged one material decision and the response is recorded.	
[ ]	The output passes the acceptance test below.	

Acceptance test

The inventory covers normal, abnormal and potential emergency conditions; every aspect-impact pair is logically linked and traceable to supplied evidence or an explicit evidence gap.

Submission and debrief

Submit the completed workbook using the trainer's naming convention. Be ready to defend one decision with evidence, explain one uncertainty, and state what would change your conclusion.
