ACTIVITY A5
Design Life-Cycle Operational Controls

Evaluate significant aspects and design controls across activities and externally provided processes, products and services.

Participant scenario and completion checklist

Version 8.0 | 20 August 2026

Scenario

MEP controls the printing line but has weak requirements for paper suppliers, cleaning contractors, waste collectors and transport providers. Instructions describe tasks but not environmental acceptance criteria.

Organisation: Meridian EcoPack Pte Ltd (MEP) is a fictional Singapore SME with 120 employees producing printed corrugated and fibre-based packaging for regional food, electronics and healthcare customers.

Your task

Control ink, paper, cleaning, maintenance, waste handling and supplier interfaces using the hierarchy of control and life-cycle perspective.

Expected output: An operational control plan, supplier requirement matrix and control-verification schedule.

Decision questions

1. Where can MEP control an activity directly and where can it only influence outcomes?

2. Which controls prevent or reduce impact at source before relying on administrative checks?

3. What acceptance evidence is proportionate for externally provided processes, products and services?

Completion checklist

Done	Check	Evidence/reference
[ ]	Map the value-chain stages from material selection through manufacture, delivery, use and end-of-life influence.	
[ ]	Link significant aspects and compliance obligations to each relevant stage and provider.	
[ ]	Select controls using elimination/reduction at source, engineering, administrative and response layers.	
[ ]	Define operating criteria, responsibility, evidence, monitoring method and change trigger for each control.	
[ ]	Write supplier/contractor environmental requirements and proportionate approval or performance evidence.	
[ ]	Evaluate three current controls for implementation and effectiveness; record improvements and owners.	
[ ]	Conclusions are traceable; assumptions, uncertainties and missing evidence are labelled.	
[ ]	A peer challenged one material decision and the response is recorded.	
[ ]	The output passes the acceptance test below.	

Acceptance test

Controls address the actual cause of impact, include operating criteria and evidence, distinguish control from influence, and extend proportionately across relevant value-chain interfaces.

Submission and debrief

Submit the completed workbook using the trainer's naming convention. Be ready to defend one decision with evidence, explain one uncertainty, and state what would change your conclusion.
