ACTIVITY A8
Close Corrective Action and Plan the 2026 Transition

Document nonconformity, root cause, corrective action, effectiveness and controlled improvement.

Participant scenario and completion checklist

Version 8.0 | 20 August 2026

Scenario

The tabletop showed that drain isolation ownership was unclear and contractor contact data was obsolete. Leadership also needs a structured gap review for the 2026 edition, including value-chain oversight and planned change.

Organisation: Meridian EcoPack Pte Ltd (MEP) is a fictional Singapore SME with 120 employees producing printed corrugated and fibre-based packaging for regional food, electronics and healthcare customers.

Your task

Close the spill-response weakness and convert ISO 14001:2026 gaps into a prioritised transition roadmap.

Expected output: An NCR/CAPA record, effectiveness review, continual-improvement report and controlled transition plan.

Decision questions

1. What is the immediate correction, what is the verified systemic cause and what similar risks exist elsewhere?

2. Which measures will demonstrate that the action remains effective after enough evidence has accumulated?

3. Which 2026 changes affect MEP's EMS, and how will the transition avoid disrupting current controls?

Completion checklist

Done	Check	Evidence/reference
[ ]	Record the nonconformity, requirement/criterion, objective evidence, affected scope and immediate correction.	
[ ]	Contain the risk and evaluate whether the issue exists in other shifts, drains, chemicals or contractor arrangements.	
[ ]	Analyse cause using 5 Whys and barrier analysis; validate the selected root/system cause with evidence.	
[ ]	Assign corrective actions to causes with owners, resources, dates and controlled-document/competence updates.	
[ ]	Define effectiveness measures, sample size, review window and closure authority before implementation.	
[ ]	Complete the ISO 14001:2026 gap matrix covering context, leadership, risks/opportunities, planned change, value-chain controls, emergen	
[ ]	Prioritise transition actions by environmental/compliance risk, dependency and readiness; present decisions required to management.	
[ ]	Document results, residual risks, lessons learned and the next review in the continual-improvement report.	
[ ]	Conclusions are traceable; assumptions, uncertainties and missing evidence are labelled.	
[ ]	A peer challenged one material decision and the response is recorded.	
[ ]	The output passes the acceptance test below.	

Acceptance test

Actions address verified causes, transition priorities are traceable to current requirements, effectiveness is measured after an appropriate interval, and a reviewer can reconstruct decisions, ownership, evidence and residual risk.

Submission and debrief

Submit the completed workbook using the trainer's naming convention. Be ready to defend one decision with evidence, explain one uncertainty, and state what would change your conclusion.
